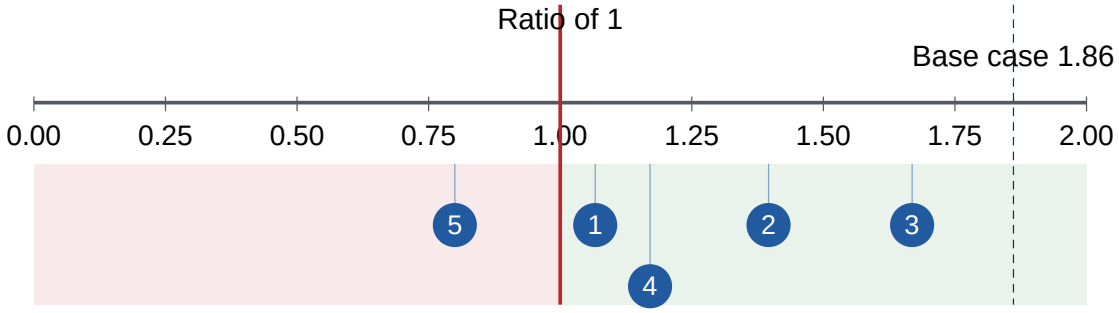
Page 7 | Scenario results table

Benefit-cost ratio in each scenario, compared with the base ratio of 1.86

Card	Change	Benefit-cost ratio	Below 1?
1	Savings fade: Savings are 30% lower each year after the first year of saving	1.07	No
2	Hidden costs: Add 600 AED of costs at year 0	1.40	No
3	A higher discount rate: Discount rate of 8% instead of 5%	1.67	No
4	A shorter life: Savings last three years (years 2 to 4)	1.17	No
5	Savings fade and hidden costs: Savings fade by 30% a year and add 600 AED at year 0	0.80	Yes

Only Card 5 is below 1. It combines fading savings and hidden costs. Among Cards 1 to 4, which each change one input, Card 1 lowers the ratio most. This compares only these settings. It is not a ranking of the assumptions in general, and it does not show that the settings are realistic.

Post your predictions here, before the results are given out



Post the card numbers and results here, after the results are given out

Write the results in Q4 on worksheet page 4. Keep your predictions visible above the line while you compare them with the results below it.
