TRAINER KEY. DO NOT DISTRIBUTE. Day 4, Session 1: Would you trust this report?

Source: the supplied GreenWaste evaluation report (R1.1 to R7.2, Table T10). Scoring: each of Q1 to Q5 scores 0, 1 or 2 (readiness guide 8/10, and no causal conclusion relying only on before/after or significance); see the full rubric in the existing trainer rubric file. Planted problems: R1.2 (four independent confirmations; headline exceeds the rule), R1.3 (mean fall read as a saving by each business), R3.2 (parallel trends "satisfied" without earlier data), R4.2 (complete cells = reliable measurement), R5.2 (largest point estimate used to say the rule is met), R7.1 (national assurance), R7.2 (budget approved with no further evidence). Section 6 is honest disclosure and can be rated Supported. **Optional AI paragraph (Trainer pack page 5, not part of the worksheet):**

> The report usefully states its outcome, compares several designs and reports uncertainty. The pilot is district-specific, and Section 6 openly describes untested trends, cut-off balance and assumed costs. City methods share records, so they should not be called independent replications. ~~Nevertheless, the matched point estimate exceeds 1,000 and all intervals exclude zero; these results make the national minimum saving and budget recommendations defensible with routine monitoring.~~ ~~The report can be signed with an implementation monitoring condition.~~

Underlined = claim the source supports. ~~Struck out~~ = claim the source does not support. Green boxes = model answers (accept equivalent wording).

Page 1 | Independent reading, Q1-Q3

Name or identifier: **(participant identifier)** **Date:** **(date)**

Read **Sections 1, 2 and 5** of the separately supplied **GreenWaste evaluation report**. Work alone, without AI or discussion. Keep the report open and cite paragraphs such as **R2.1** or **Table T10**.

Q1 | Outcome and scope

Using the pilot row, name the outcome, units, period and population described. Cite the source.

> Score 2: recorded annual waste cost reduction (AED per business) 12 months after, among 400 businesses in one pilot district. Source R2.1-R2.2 / T10.

Q2 | Comparison and fairness

Who is compared in the pilot? Explain why that comparison can be fair, rather than only naming the groups. Cite the source.

> Score 2: 200 businesses assigned by lottery to join versus 200 assigned to wait. The lottery reduces systematic starting differences between the groups, which makes it fairer than before and after alone. Source R2.1 / R3.1. (Accept a caveat on follow-up or district reach.)

Q3 | Estimate, interval and rule

Write the pilot estimate and 95% interval with consistent units and signs. Explain what the interval says about the authority's 1,000 AED rule.

> Score 2: saving 1,014 AED, 95% interval 862 to 1,167 AED (above zero). The point estimate is above 1,000 but the interval spans it, so the minimum is not settled. Source T10. Equivalent: cost difference -1,014 with interval -1,167 to -862, compared with -1,000, with consistent signs.

Continue with Q4-Q5 on page 2 before discussing your answers.

These responses assess reading from a source, not recall of yesterday's numbers. Positive-saving or negative-cost-difference wording is acceptable when the interval and meaning are consistent.

Page 2 | Independent reading, Q4-Q5

Name or identifier: **(participant identifier)**

Q4 | An important concern from the source

Name one important concern, cite the exact report passage and explain why it matters for the decision. Acceptable concerns need not all be the same.

> Score 2: a concern with a locatable passage and decision relevance. Examples: R1.2/R5.2 (the largest point estimate, 1,029, used to say the 1,000 rule is met); R1.3 (mean fall read as each business's saving); R3.2 (parallel trends "satisfied" with no earlier series; R6.1 says only one before measure); R4.2 (complete cells do not show reliable measurement); R7.1/R7.2 (national assurance and budget approval outrun the evidence). Accept any other well-supported concern.

Q5 | Advice that the evidence supports, and an evidence request

Give a recommendation the stated evidence can support. Request one specific document or result and explain how its answer could change your advice.

> Score 2: a bounded, proportionate action plus a specific request with a decision purpose. Example: "With conditions: approve a limited next phase with monitoring, but request the full cost inventory and persistence evidence (R6.3), since a lower benefit-cost ratio or shorter savings would change the spending decision." Accept alternatives with clear limits.

My opening judgement

Sign off / With conditions / Request evidence

My source-based reason:

> Accept Sign off (rare), With conditions or Request evidence if the reason cites the source. Example: "Request evidence: T10/R5.2: the interval for the matched estimate (859 to 1,200) spans 1,000, so the rule is not settled."

Finish independently before comparing choices. Your recommendation is judged by its evidence and limits, not by selecting a required option. These opening responses will be collected or copied; later revisions are recorded separately.

Page 3 | Rate an executive-summary claim

Read **R1.1-R1.3** and follow the selected claim to its sources.

Supported: the source supports the claim within its limits.
Concern: a specific uncertainty or missing check could change the judgement.
Unsupported: the claim exceeds or contradicts its source.

A supported passage

Exact paragraph/claim and the checking source:

> Example (Section 1): R1.1 names the decision, outcome and the 1,000 AED rule. Or Section 5: R5.1/T10 reports estimates and intervals.

Why this claim is supported:

> It correctly describes the decision, the outcome and the minimum-saving rule, with no claim beyond the source.

An important concern or an unsupported claim

Exact paragraph/claim and the checking source:

> Example: R1.2 "four independent confirmations" or R5.2 "point estimate ... to conclude that the rule is met". Check against T10, R3.4 and R5.3 (city analyses share records).

Rating and reason:

> Unsupported: the city analyses share records and compare different things (R5.3, R3.4), and the matched interval (859 to 1,200) spans 1,000 (T10). The pilot estimate (1,014) also spans it.

Evidence that could change my judgement:

> Evidence that could change the judgement: a documented rationale for the preferred analysis and independent evidence, or a risk tolerance for the minimum saving.

My Wall Sheet 1 note

Paragraph/claim → rating word → reason. No name on the wall.

> Example note: R1.2 → Unsupported → "independent confirmations" but the three city rows use shared records (R5.3).

Wall Sheet 1 is the executive-summary A1 grid. It is not worksheet page 1. Rate a named claim; another claim in the same section may deserve a different rating.

Page 4 | Our assigned section and source

Group: ___ Assigned section: ___
Eight allocations: **3 / 4 / 5 / 6 / 7 / 3 / 5 / 7**.

Our strongest supported passage

Paragraph ID, claim and source-based reason:

> Group-specific by section (see section key): Section 3: R3.1/R3.3/R3.4 comparisons and requirements; Section 4: R4.1 counts and synthetic scope; Section 5: R5.1/T10 estimates and intervals; Section 6: R6.1-R6.3 genuine limits and assumed inputs; Section 7: R7.1 a concrete action.

Our important concern, if warranted

Paragraph ID, claim and reason. If the section only supplies supported disclosure, say so rather than inventing an error.

> Group-specific by section: 3: R3.2 (common location does not show parallel untreated change); 4: R4.2 (complete cells do not establish real measurement/follow-up); 5: R5.2 (largest point estimate does not settle the minimum); 6: no planted error (disclosure is Supported; it does not resolve the limits or justify R7); 7: R7.1/R7.2 (national assurance and sufficient budget evidence outrun the sources).

What evidence could change the judgement?

Name a document/result and its decision purpose.

> 3: earlier cost trends and concurrent-change records (R6.1). 4: recruitment, follow-up and measurement-validation documents (R4.2/R6.2). 5: rationale for the preferred analysis and the 1,000 rule risk (T10). 6: the evidence on transfer, costs and persistence. 7: target-population comparison and full costs/persistence (R6.1/R6.3).

Our Wall Sheet 2 note

Paragraph/claim → rating word → reason. No names.

> Group-specific; model format: paragraph/claim → rating word → reason (e.g. R3.2 → Concern → "common city conditions do not show parallel untreated trends; only one before measure"). No names.

During the wall discussion

Are we rating the same claim? Which passage explains any difference?

> Different people may rate different claims in the same section: look for the specific passage that explains any difference. Supported disclosure can coexist with an unresolved issue.

Wall Sheet 2 is the A1 grid for Sections 3-7. A Supported disclosure can coexist with an unresolved issue; the rating does not mean every limitation is resolved.

Page 5 | Final judgement and targeted feedback

The unresolved issue that matters most

Evidence needed, source and how it could change the action or conditions:

> The matter that most affects the action: usually the 1,000 AED rule not being settled (T10, R5.2), national transfer (R6.1) or full costs (R6.3). State the evidence needed and how it could change the action or conditions.

My final verdict, with the report open

Sign off / With conditions / Request evidence

Reason and source; what changed or stayed the same from my opening judgement?

> Accept any verdict with a reason and the source. A changed or unchanged verdict can both be well reasoned; judge the evidence and limits, not agreement with the room.

My independent evaluator request

Close the report. Work alone without AI. Request a document/result and state its purpose and decision consequence.

> Example: "Send the pilot-versus-national population and delivery comparison (R6.1), to judge whether the 1,014 pilot result transfers; if the populations differ, I would limit the roll-out." Accept any specific request with a purpose and effect.

Private reading feedback

Ability to revisit: outcome/scope / comparison/fairness / interval/rule / source-based concern / advice/request

Targeted retry and source to reread (from your trainer):

> Trainer entry (private): the ability to revisit and the retry source, e.g. "interval/rule: reread T10 and R5.2".

Opening score: ___ / 10 **Retry score:** ___ / ___
Keep these separate. A readiness guide is not a certification.

Do the retry when instructed in Session 2; do not replace your opening response. Session 2 supplies corrected findings for drafting, distinct from this review report. No AI Snapshot forms part of this session’s assessment.
