TRAINER KEY. DO NOT DISTRIBUTE. Day 4, Session 2: What should the director do next? (brief writing)

Source: corrected findings F1-F4 / Table T11 and D11. Key facts: pilot 1,014 AED (862 to 1,167: above zero, spans 1,000); city extra change 812 (792 to 833); cut-off 721 (498 to 943); matching 1,029 (859 to 1,200); benefit-cost ratio 1.86 is conditional (0.80 under 30% decay plus 600 AED extra costs); city methods share records. **Model brief (101 words, sources outside the count: F1.1-F1.2; D11 / F4.2; F1.1 / F3.1-F3.2; F3.2 / F4.2).** It is one defensible option, not the required answer. A substantive repair changes attribution, reach, minimum-saving confidence, spending scope or an accountable condition; adding caution to unconditional national approval is not enough. Accept other bounded actions with a locatable source, a relevant limit and a specific request with a decision purpose. **Supplied AI brief (112 words):** keep the pilot figures; correct national assurance (F1.1-F1.2) and "establishes good value" (F3.1-F3.2); omission: no specific evidence request with a decision purpose (F4). **Retry checks (slips 1-5):** 1 outcome and scope: annual waste-cost reduction, AED per business, 12 months, 400 businesses in one pilot district; 2 comparison: 200 join vs 200 wait, lottery reduces systematic selection; 3 estimate/interval: 1,014, 862 to 1,167, above zero, spans 1,000; 4 concern: accept any precise, consequential source-based concern; 5 advice: bounded action with population, causal and economic limits and a specific request.

Underlined = claim the source supports. ~~Struck out~~ = claim the source does not support. Green boxes = model answers (accept equivalent wording).

Page 1 | My first draft, without AI

Name or identifier: **(participant identifier)**

Use **Corrected GreenWaste findings F1-F4/T11** and **D11**, separately supplied pages 1-2. This morning's report is not the drafting authority.

Decision: national rollout for scores at or below 58 and a proposed 1,800 AED allowance per business; limited next phase or deferral is also possible. Allowance and national total are not measured cost evidence.

Write **connected prose, at most 150 words**. Include:

Finding and source → action/condition → important limit → next evidence/purpose.

> In one pilot district, the lottery comparison estimated 1,014 AED annual waste-cost saving per business at 12 months; its 95% interval, 862 to 1,167 AED, spans the 1,000 AED rule. Do not commit to national rollout and its proposed allowance yet. Consider a limited next phase with a decision checkpoint before wider spending. The pilot does not establish national reach, and the favourable economic ratio depends on unverified inputs. Request a comparison of intended delivery conditions and businesses with the pilot, plus full cost and persistence evidence. Use these to reconsider scale and budget; specify acceptable minimum-saving risk before the checkpoint.
> *(Model, 101 words. Check the 150-word maximum on the page: whitespace-separated words.)*

Brief body word count: ___ / 150
Sources, on a separate line outside the word limit:

> F1.1-F1.2 (finding); D11 / F4.2 (action); F1.1 / F3.1-F3.2 (limit); F3.2 / F4.2 (request).

Work independently before peer review or AI. Keep this version. Count whitespace-separated body words; headings/labels count if included in the body. The worked model is deliberately not printed on this drafting sheet.

Page 2 | My partner checks the source

Author: **(author)** **Reviewer:** **(reviewer)**

For each check write an exact sentence/source or an omission. Use **Supported / Revise / Missing**, with a reason; a tick or number match is not enough.

Check	Sentence/source, rating and reason
Source for important claims	**Supported: "In one pilot district, the lottery comparison estimated 1,014 AED ... " cites F1.1-F1.2; D11 for the proposal.**
Comparison and population	**Supported: "In one pilot district ... lottery" names who was compared and the district.**
Result, units, period and interval against our rule of at least a 1,000 AED reduction	**Supported: "1,014 AED ... at 12 months; its 95% interval, 862 to 1,167 AED, spans the 1,000 AED rule" has units, period and the interval against the rule.**
Action, scale and accountable condition	**Supported: "limited next phase with a decision checkpoint" scales the action and sets a condition.**
Important limit linked to the action	**Supported: "The pilot does not establish national reach, and the favourable economic ratio depends on unverified inputs." links to the action. (Revise if the limit is boilerplate.)**
Specific evidence request and decision purpose	**Supported: "Request a comparison of intended delivery conditions ... plus full cost and persistence evidence"; purpose: "reconsider scale and budget". (Missing if no purpose.)**

The strongest supported claim

Exact sentence and source:

> Example: "In one pilot district, the lottery comparison estimated 1,014 AED annual waste-cost saving per business at 12 months; its 95% interval, 862 to 1,167 AED, spans the 1,000 AED rule." Source F1.1-F1.2.

One important repair

Sentence or omission, finding/paragraph ID, and why the advice needs changing:

> Example: "Do not commit to national rollout..." is stated but there is no accountable condition: add a decision checkpoint and who is responsible. Or: the request lacks a decision purpose (F4.2). The advice needs changing because an unconditional or unspecific condition does not constrain the decision.

Check units/time and interval against our rule of at least a 1,000 AED reduction, not only the point estimate. Look for a scale and condition that fit the size of the decision, a relevant limit and a specific request with decision purpose. Different actions can satisfy the same rubric.

Page 3 | My substantive revision

Old sentence:

> Example: "I recommend national rollout with routine monitoring."

Revised sentence and source:

> Example: "I recommend a limited next phase with a decision checkpoint before wider spending, because the pilot interval 862 to 1,167 spans 1,000 and covers one district (F1.1-F1.2)."

How the advice changes in scale, condition, confidence or next evidence:

> Scale changes from national to a limited phase; condition: a checkpoint with acceptable minimum-saving risk; confidence: lower; next evidence: target-population/delivery comparison and full costs and persistence (F4.2, F3.2).

My revised connected brief

At most 150 words; preserve the first draft on page 1.

> In one pilot district, the lottery comparison estimated 1,014 AED annual waste-cost saving per business at 12 months; its 95% interval, 862 to 1,167 AED, spans the 1,000 AED rule. Do not commit to national rollout and its proposed allowance yet. Consider a limited next phase with a decision checkpoint before wider spending. The pilot does not establish national reach, and the favourable economic ratio depends on unverified inputs. Request a comparison of intended delivery conditions and businesses with the pilot, plus full cost and persistence evidence. Use these to reconsider scale and budget; specify acceptable minimum-saving risk before the checkpoint.

Body word count: ___ / 150 **Separate sources:** **F1.1-F1.2; D11 / F4.2; F3.1-F3.2; F3.2 / F4.2 (outside the word count)**

Complete this peer-informed revision before the AI task. Record any later AI-assisted change separately rather than replacing your own version without a record.

Page 4 | Copilot Snapshot, Stage 1

8 minutes. This response was written for the exercise. It is not a real AI answer.

The initial, leading prompt

Using corrected GreenWaste findings F1-F4 and D11, write a 150-word director brief recommending national rollout with the current eligibility rule and proposed allowance. Include the headline, implications, recommendation and risk.

The complete supplied brief

> The pilot lottery estimates 1,014 AED annual waste-cost saving per business at 12 months, with a 95% interval of 862 to 1,167 AED. This is evidence of a reduction in the pilot district.
>
> ~~The point estimate exceeds the 1,000 AED rule, so national expansion meets the authority's standard.~~ The interval includes lower savings, ~~making continued monitoring sensible rather than requiring a delay.~~
>
> ~~Authorise rollout to all businesses scoring at or below 58 and commit the proposed 1,800 AED allowance.~~ ~~The 1.86 benefit-cost ratio establishes that this spending is good value.~~
>
> ~~The principal risk is inconsistent implementation.~~ ~~Address it through routine monitoring and periodic reporting; the evaluation already gives sufficient assurance for approval.~~

Your source-based markup

Keep one defensible sentence. Correct two unsupported assurances. Identify one material omission and its decision consequence. Use F1-F4, not AI confidence.

> Keep: the first paragraph (the pilot comparison, 12 months, 1,014 AED, 862 to 1,167, a reduction in the pilot district). Correct: "the point estimate exceeds the 1,000 rule, so national expansion meets the standard" (the interval spans 1,000; one district: F1.1-F1.2); "The 1.86 ratio establishes that spending is good value" (a conditional model on assumed inputs: F3.1-F3.2); "sufficient assurance for approval". Omission: no specific evidence request with a decision purpose (e.g. full cost and persistence evidence, F3.2/F4.2), so the decision consequence (scale and budget) is missing.

A source ID and the claim it checks:

> F1.1-F1.2 checks the 1,000 claim; F3.1-F3.2 checks "good value"; F4.2 checks the missing request.

Do not open the paper alternative on page 6 until Stage 1 is finished.

Page 5 | Copilot Snapshot, Stage 2

7 minutes. Use Copilot if available/approved; otherwise use page 6 after Stage 1. Paste only this fictional case and your brief prose, not identifiers or scores.

A decision-focused prompt

I advise on D11: national rollout for scores at or below 58 and a proposed 1,800 AED allowance. Use only corrected findings F1-F4 and T11 below. Ask at most two questions about decision priorities and acceptable minimum-saving risk before drafting. After my answers, write connected prose of at most 150 words: finding, an action and condition that fit the size of the decision, important limit, and specific evidence request with decision purpose. Keep the comparison, population, units, period and interval against the 1,000 AED rule accurate; distinguish model assumptions from facts. Put source references outside the word limit. Do not invent missing checks or guarantee national value. Compare one substantive change with my own draft. [Paste D11, F1-F4/T11 and brief prose only; omit names and scores.]

Source bundle: separately supplied Corrected GreenWaste findings, pages 1-2: D11, F1-F4 and Table T11.

I used: Copilot / prepared paper alternative

Compare with my own draft

One substantive change, its source and its effect on the advice:

> Example: the AI version/paper alternative turns "national expansion meets the standard" into "do not commit to national rollout yet / limited next phase" (F1.1-F1.2). It changes the advice from approval to a bounded step.

One claim or omission I still need to verify, and how:

> Example: whether "limited next phase" is feasible; whether the 101 words and sources are accurate; whether the ratio dependence on assumptions is correct (F3.1-F3.2). Check each against F1-F4 and D11.

Output body word count: ___ / 150 **Sources separated?** Yes / No

Answer at most two clarifying questions briefly. If the response is slow, use the prepared alternative without extending the task. No second chat is required. Word count is a format check, not a source-faithfulness judgement.

Page 6 | Prepared paper alternative

Hold until Stage 1 is finished. Use for Stage 2 when Copilot is unavailable, slow or not approved. This response was written for the exercise. It is not a real AI answer.

Clarifying questions

Before drafting: which decision consideration is binding, and what risk of falling below 1,000 AED is acceptable?

One possible conditional revision

> In one pilot district, the lottery comparison estimated 1,014 AED annual waste-cost saving per business at 12 months; its 95% interval, 862 to 1,167 AED, spans the 1,000 AED rule. Do not commit to national rollout and its proposed allowance yet. Consider a limited next phase with a decision checkpoint before wider spending. The pilot does not establish national reach, and the favourable economic ratio depends on unverified inputs. Request a comparison of intended delivery conditions and businesses with the pilot, plus full cost and persistence evidence. Use these to reconsider scale and budget; specify acceptable minimum-saving risk before the checkpoint.

Sources: F1.1-F1.2; D11/F4.2; F3.1-F3.2. Compared with the supplied draft, national assurance becomes a bounded next-step recommendation; the proposed allowance is not treated as validated spending.

The source line is outside the brief’s 150-word body. The action is one defensible option, not a required vote.

Verify it against F1-F4

One useful change compared with the supplied brief:

> Example: national assurance becomes a bounded next step; the allowance is not treated as validated spending; a decision checkpoint is added.

One omission, condition or remaining claim I would challenge:

> Example: the checkpoint/risk is not defined (who decides and what minimum-saving risk is acceptable); the claim "ratio depends on unverified inputs" should be checked against F3.1-F3.2.

Record your comparison on page 5. Do not copy this text into the independent request on page 7.

Page 7 | Independent request and reading retry

Close the AI output. Work alone; corrected findings may remain open.

My evaluator request

The document/result to send:

> Example: the comparison of intended national delivery conditions and businesses with the pilot (F4.2), plus the full cost and persistence evidence (F3.2).

Why I need it:

> To decide whether the pilot result can guide expansion and whether the 1,800 AED allowance and ratio hold.

How a favourable or unfavourable answer could change my advice:

> Favourable: businesses and delivery are similar and costs and persistence hold, so I would move to a wider phase. Unfavourable: they differ or costs are higher/savings fade (ratio 0.80 in the tested combination), so I would stay with a limited phase or defer.

Targeted reading feedback

Assigned separate retry slip: ___ Ability: (ability named on the slip: 1 outcome and scope, 2 comparison and fairness, 3 estimate/interval/rule, 4 source-based concern, 5 advice and request)

Use the source named on that slip. The Session 1 report is for the reading retry only, not your brief's drafting evidence.

Original reading result: ___ / 10
Retry item result(s), recorded separately: (retry item result, 0 to 2 each; recorded separately from the opening score)

What improved and what remains to practise:

> Example: "Improved: I now state the interval against the rule; still to practise: giving the request a decision purpose." Accept any honest record.

Retry checks remain trainer-held until your attempt. The proposed readiness guide is a teaching check, not certification or proof of transfer to a different programme. The other provider owns the final simulation; no additional Session 3 is added.
